DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/8/2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 9-14, 19-23, and 26-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Papasakellariou (US 6,700,919; newly cited art).

Regarding claims 1, 2, 9-14, 19-23, and 26-28, Papasakellariou, as shown in figures 2-4, teaches a receiver comprising a channel estimator (26) to determine an initial channel estimate (52) and the initial channel estimate is

iteratively updated or modified (biased) (56, 58, 60, 62) to be used for demodulating (64). See also column 6, line 13 to column 12, line 10.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 3-8, 15-18, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Papasakellariou (US 6,700,919; newly cited art) in view of Magee (US 2003/0076904; art of record).

Regarding claims 3-8, 15-18, 24 and 25, Papasakellariou teaches all subject matter claimed except for further teaching the steps of transforming,

performing and inverse transforming in order to provide the biased to the initial channel estimate. However, Magee, from the same field of endeavor and as shown in figures 9-11, teaches a method and apparatus for calculating the scaled channel estimate by transforming (FFT), performing (126) and inverse transforming (IFFT). See also paragraphs [0055] – [0068]. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the receiver of Papasakellariou by employing the teaching of Magee since it is just an alternative way of calculating the channel estimate.

Response to Arguments

7. Applicant's arguments with respect to claims 1-28 have been considered but are moot in view of the new ground(s) of rejection.
